

J-DSP in Digital Signal Processing Course & Assessment Results

J-DSP

- J-DSP provides
 - an interactive graphical user interface,
 - Easy visualization of the signal flow and the transformations that occur from input to the output stages.
 - Since each block represents a functional abstraction of the concepts directly.
 - No programming experience is required to simulate or experiment several DSP concepts.
 - Students can directly experiment with their acquired classroom knowledge in J-DSP environment.
- Students can learn DSP concepts without having to worry about learning the syntax of a programming language.
- Provides an “MATLAB Script export” functionality which later helps students to recreate their simulations in MATLAB.

Example Laboratories

- Convolution,
- Z- Transforms and Frequency Response,
- FIR and IIR filter design,
- Fast Fourier Transform,
- Multirate Signal Processing.

Example Simulation

ASU
ARIZONA STATE UNIVERSITY

Assessment

- **General Assessment :**
 - To assess the simplicity and interactivity of J-DSP environment
 - Effectiveness in teaching DSP concepts
 - Improvement in average student scores after using J-DSP
 - Effectiveness in teaching distance learners.
- **Concept-Specific Assessment:**
 - To determine the extent of student learning using J-DSP online laboratories.

ARIZONA STATE UNIVERSITY

General Assessment Results

RESULTS:

- 95% of students liked the concept of internet based simulations.
- 70% of students responded that it took them less than 30 minutes to get familiarized with the J-DSP environment.
- 85.5% students agreed that they would consider using J-DSP for constructing their own educational simulations.

General Assessment Results

Evaluation Questions	Strongly Agree (%)	Agree (%)	Neutral (%)	Disagree (%)	Strongly Disagree (%)
Establishing and connecting blocks is easy	53	39	7	1	0
The graphical interface of J-DSP is intuitive and user-friendly	31	63	5	1	0
In my opinion, this (J-DSP) type of on-line lab concept is beneficial for distance learning	97 (Yes)				3 (No)
I would consider J-DSP for small simulations apart from the lab exercises	86 (Yes)				14 (No)
With the help of a simple manual, it is possible to learn the basics of DSP by using J-DSP	86 (Yes)				14 (No)
The J-DSP should be established as a full-fledged tool	93 (Yes)				7 (No)
How long did it take to get familiar with the basics of the J-DSP environment	< 15 min : 36 %		15-30 min : 32 %		
	30-60 min : 24%		> 60 min : 8%

ASU
ARIZONA STATE UNIVERSITY

Concept-Specific Assessment Results

RESULTS:

- Z-transform exercises:**
 - Students understood relationship between *impulse response*, *frequency response* and *z-transform* properties.
 - 91% of students responded that they understood the relationship between pole-zero placement and frequency response plots.
- Filter Design exercises:**
 - Students understood FIR and IIR Filter design concepts including *linear phase*, tradeoff between *transition characteristics* with *window type*.
 - 87% of students reported that they understood which window is suitable for sharp transitions.
- FFT exercises:**
 - FFT properties such as *signal symmetry*, *spectral resolution*, *window effects* were understood easily with J-DSP environment.
 - 88% of students responded that they understood signal symmetries in the FFT domain.

8

ASU ARIZONA STATE UNIVERSITY Concept-Specific Assessment Results

Evaluation Questions	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
	(%)	(%)	(%)	(%)	(%)
The J-DSP on-line labs helped me to understand the concepts of the z-transform	50	46	3	1	0
My understanding of the concepts of FIR and IIR filter design is enhanced by the J-DSP labs	42	47	8	3	0
The general concepts of using FFT in signal analysis is clear by performing a J-DSP simulation	24	61	13	2	0
I have learned how to generate a sinusoid with a digital filter	29	55	11	3	2
Enough information is available on the help screens and the dialog windows.	49		33.5		13.5
The relationship between the impulse response and the transfer function is clear	95 (Yes) (No)				5
After performing the J-DSP lab it is clear that the FFT spectral resolution is limited by the FFT size, the window type, and the window size	99 (Yes) (No)				1
J-DSP labs enhanced my learning of the basic DSP concepts (Labs 1-4 average statistics)	92 (Yes) (No)				8

9

ASU ARIZONA STATE UNIVERSITY Pre/Post Lab Assessments

- J-DSP Labs 2,3 and 5 resulted in significant improvements of 13.5, 9.5 and 12 points in their average RAW Score. [See Table below]

J-DSP Lab Number	Number of subtests or questions in each lab	Average raw score [MAX = 100]		
		Pre-lab	Post-lab	Improvement in the raw score
1	6	78.75	83.5	4.75
2	5	62.0	75.5	13.5
3	10	50.0	59.5	9.5
4	4	61.25	65.0	3.75
5	4	47.5	59.5	12.0

- The improvement can be attributed to
 - Simulations involving Interactive graphics.
- The assessments were also helpful in redesigning some lab exercises.

10

ASU ARIZONA STATE UNIVERSITY Statistical Analysis - Effect size

The Effect Size (ES) measure:

- It is the ratio of the difference in means to the pooled standard deviation.

$$\text{Effect size: } d = \frac{\mu_2 - \mu_1}{\sigma_{pooled}}$$

where $\sigma_{pooled} = \sqrt{\frac{\sigma_1^2 + \sigma_2^2}{2}}$

The Effect Size (ES) Correlation measure:

- The ES correlation, r , measures the degree to which the pre-lab and the post-lab assessment data are related

$$\text{ES Correlation } r = \frac{d}{\sqrt{d^2 + 4}}$$

The Effect Size (ES) measure:

- The ES measure gives valuable information on how strong the effect of involvement was.
- Here, it corresponds to degree of student learning attributed to J-DSP.

11

ASU ARIZONA STATE UNIVERSITY Statistical Analysis

J-DSP Lab Number	Mean score		Standard deviation		Effect size	Correlation coefficient
	Pre-lab	Post-lab	Pre-lab	Post-lab		
1	78.75	83.5	16.41	15.05	0.302 (Medium)	0.149
2	62.0	75.5	16.98	11.84	0.922 (Large)	0.419
3	50.0	59.5	21.1	20.39	0.458 (Medium)	0.223
4	61.25	65.0	30.9	34.20	0.115 (Small)	0.057
5	47.5	59.5	9.72	12.50	1.072 (Large)	0.472

- In general, ES values of 0.2, 0.5, and 0.8 relate to 'small', 'medium', and 'large' degree of involvement, respectively .
- J-DSP labs 2, 3, and 5 resulted in ES of 0.92, 0.46, and 1.07, respectively.
- This result is consistent with the pre/post lab assessment results.

13

ASU ARIZONA STATE UNIVERSITY Collaborative Environment

The new collaborative simulations feature of J-DSP is easy to use.

The inbuilt chat facility was useful in running collaborative simulations and also communicating with my partner.

The J-DSP manual (and the demonstration video file) were very useful in getting familiar with the collaborative simulations working procedure.

In my opinion, J-DSP collaborative simulations version can be used as a teaching tool for various signal processing concepts.

The new collaborative simulations feature operates fast and there is not much delay in exchanging simulation environments.

I understood the basics of peak picking analysis and synthesis process by working with a partner.

I better understood the effects of pole-zero cancellation on the frequency response with the help of the new features in J-DSP.

The new collaborative simulations feature enhanced my understanding of signal processing concepts.

Statement	Agree (%)	Neutral (%)	Disagree (%)
The new collaborative simulations feature of J-DSP is easy to use.	~95	~5	0
The inbuilt chat facility was useful in running collaborative simulations and also communicating with my partner.	~85	~15	0
The J-DSP manual (and the demonstration video file) were very useful in getting familiar with the collaborative simulations working procedure.	~80	~20	0
In my opinion, J-DSP collaborative simulations version can be used as a teaching tool for various signal processing concepts.	~75	~25	0
The new collaborative simulations feature operates fast and there is not much delay in exchanging simulation environments.	~70	~30	0
I understood the basics of peak picking analysis and synthesis process by working with a partner.	~65	~35	0
I better understood the effects of pole-zero cancellation on the frequency response with the help of the new features in J-DSP.	~60	~40	0
The new collaborative simulations feature enhanced my understanding of signal processing concepts.	~50	~50	0

14

ASU ARIZONA STATE UNIVERSITY Assessment Results

Useful for the instructors to teach online students.

Students can learn collaboratively particularly when they are from remote locations.

Assessment Type	Percentage of students who answered correctly
Pre-lab Assessment	70.37
Post-lab Assessment	90.74
% improvement	20.37
